Opus- .exe .Endothelin-1 and nitric oxide in experimental cardiac arrest and cardiopulmonary resuscitation. A study was undertaken to investigate the effects of endothelin-1 (ET-1) and nitric oxide (NO) in the pathophysiology of cardiac arrest and resuscitation. Prospective, controlled study. University hospital. Eighteen New Zealand white rabbits. Pulseless electrical activity was induced by ascending aortic occlusion in all animals. Resuscitation was attempted by inflating a pneumatic blood pressure cuff around the neck of the animal. Six rabbits (group I) received 0.1 mL of ET-1 into the femoral artery (6 pmol/kg) after 10 mins of cardiac arrest, and six (group II) received 0.2 mL of saline (control). In groups III, IV, and V, the same animals received 0.3 mL of ET-1, 0.6 mL of ET-1, and 0.6 mL of ET-1 + 0.3 mL of nitroprusside, respectively. Blood samples were collected for measurement of ET-1, NO, and hemoglobin. Hemodynamics and arterial blood gas analysis were measured at

baseline and after 10 mins of cardiac arrest and resuscitation. Mortality and neurologic function at 24 hrs after resuscitation. ET-1 levels increased in groups I (0.64 +/- 0.13 pmol/mL), II (1.22 +/- 0.29 pmol/mL), III (1.25 +/- 0.34 pmol/mL), and IV (2.59 +/- 0.57 pmol/mL) (p Q: Nested functions not working in c I am writing some code to find the largest palindrome number in an array. My code is: void first(){ int numbers[100]; int length; printf("Enter a number to be entered in the array "); for(82157476af
